

The Modern ERP for UK Finance Teams

Rillet is the AI-native ERP that high-growth UK companies trust for revenue recognition, multi-entity consolidation, and investor reporting. To enable real-time finance and a continuous close, Rillet rebuilt the general ledger from the ground up for the AI era.

Key platform functionality

01 Aura AI

This is intelligence that actually understands accounting. Aura AI is built for hyper-specific accounting workflows and trained on real-world data. It operates natively in platform, retains the full context of the chart of accounts, and executes end-to-end alongside teams.

02 Native Integrations

Unlock in-house, API-based integrations across CRM, Billing, AP, Tax, Payroll, and Banking that take 5 minutes or less to set up. Rillet maintains total control over data flow, pulling granular metadata to automate reconciliation at scale (e.g. 99.999% auto-match rate for Stripe transactions).

03 Autonomous Revenue & Expense

Automate complex deferred revenue and expense allocations in line with your revenue recognition standards. Rillet AI identifies and books prepaids, fixed assets, and accruals. The platform instantly schedules future journal entries on contract upload and processes every expense for real-time spend analysis.

04 Multi-Entity & Multi-Currency Ready

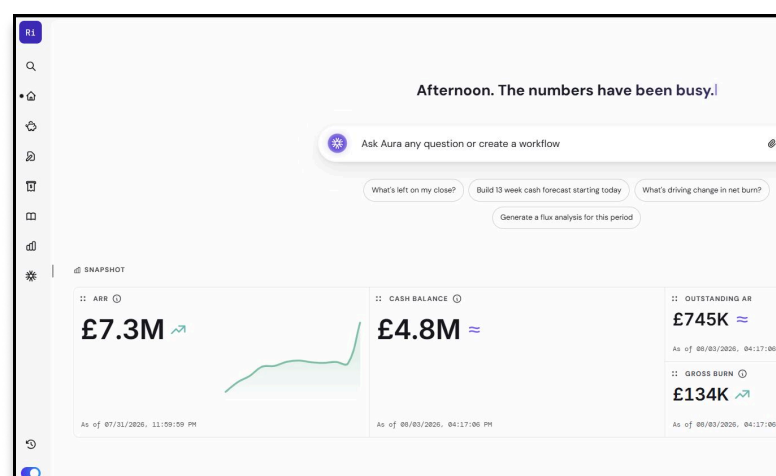

Rillet offers real-time consolidation and automated intercompany eliminations across currencies, including GBP as a functional or reporting currency. Global teams switch between subsidiary-level detail and a consolidated parent view with a single click.

05 Real-Time Reporting

Rillet delivers institutional-grade financial statements by unifying statutory and SaaS metrics directly from the general ledger, ensuring board decks and audit data match. AI-powered flux analysis and one-click drill-downs to source allow teams to explain variances.

Rillet excels at:

- Mid-market through enterprise
- Complex revenue models
- Multi-entity and multi-currency

Close Management & Audit Readiness

Integrated close workflows with assigned owners, real-time status tracking, and audit-ready controls that gate entries before they reach the GL.

Accountant-Led Implementations

Rillet's in-house team of qualified accountants ensures a 6-week average implementation time and a 100% success rate. We take it even further by closing your first month with you.

Controls & Compliance for Scale

Rillet enables public and IPO-ready companies to scale with complete audit trails and SOC 1 / SOC 2 permissions and controls.

Trusted by industry leaders

Built for the UK

Rillet supports UK finance teams end-to-end, from live bank connectivity to fully compliant HMRC VAT filing.

Multi-Book: UK GAAP & IFRS

For global companies with UK subsidiaries, Multi-Book lets you report the same entity under more than one accounting standard, such as UK GAAP and IFRS, or local and US GAAP. Post topside adjustments to secondary books to capture the differences between standards, then compare results side by side, without separate systems or spreadsheets.

UK VAT: HMRC Making Tax Digital

File UK VAT end-to-end, fully compliant with HMRC Making Tax Digital (MTD). Through managed partner integrations, Rillet can handle VAT aggregation, calculation, and filing to HMRC using your own tax and transaction data. Submit VAT filings automatically or with one-click approval, at no additional filing fees.

UK Bank Connectivity

Connect UK bank accounts directly through Plaid for live transaction data and automatic reconciliation. Pick your bank, log in once, and transactions sync straight into cash reconciliation, with no statement downloads or manual imports. Plaid rounds out Rillet's European coverage at 2,000+ banks across the UK and EU, connected through direct APIs, so cash reconciliation stays continuous instead of becoming a month-end scramble.
